Comprehensive Midwifery Care in Ny "B" G5 P2 A2 with Normal Pregnancy

In BPM Mrs Indri Ari, Amd.Keb

ABSTRACT

By : LENI ARMYNDA SAMPRADIANA

Preliminary : Pregnancy is a physiological one, but complaints often occur that interfere with the comfort of pregnant women such as back and back pain, constipation, hemorrhoids, weakness, nightmares, anxiety, headaches, feeling fat, insomnia, dizziness, like going unconscious , shortness of breath, nausea and vomiting, touch pain in the breast, pain, stretching lines, itchy skin, false contractions, aches and rheumatism, frequent urination, fungal infections, leg cramps, calf pain, varicose veins, heel and swollen feet. **Purpose :** the aim of this LTA is to provide comprehensive care for pregnant, maternity, postpartum, BBL, neonates and family planning mothers with complaints of swelling in the legs.

Methods : This method of care in LTA is by interviewing, observing and managing care. The subject in this care was the "B" G5 P2 A2 39 week normal pregnancy with swelling in the legs at the BPM Mrs. Indri Ari Amd, Keb. The results of comprehensive midwifery care for "B" during the second and third trimester of pregnancy with swelling in the legs, in labor with normal delivery, in the postpartum period with normal puerperal, in BBL with normal BBL, in term neonates and using KB. **Result :** The conclusion of this comprehensive midwifery care is obtained by doing midwifery care independently and collaboration and early treatment, no complications of pregnancy, childbirth, childbirth neonates were found. It is recommended to midwives to emphasize exclusive breastfeeding for 6 months in newborns and provide counseling to all mothers who have babies about the importance of breast milk for the growth and development of babies up to the age of 2 year

Keywords: Midwifery Care, Comprehensive, swollen feet.
