

ABSTRAK

IMPLEMENTASI PENCEGAHAN DAN PENGENDALIAN INFEKSI (PPI) DI RSI GARAM KALIANGET TAHUN 2022

Oleh: Riska Wahyuningtiyas

Indikator kualitas pelayanan kesehatan rumah sakit adalah keselamatan pasien (*patient safety*) dan pencegahan infeksi nosocomial adalah determinan penting didalamnya. Pencegahan dan Pengendalian Infeksi (PPI) harus dikelola dan diintegrasikan secara struktural dan fungsional di semua bagian RS untuk mencegah infeksi nosocomial. Tujuan untuk mengetahui Implementasi Pencegahan dan Pengendalian Infeksi (PPI) di RSI Garam Kalianget Tahun 2022.

Metode penelitian deskriptif kuantitatif, populasi 287 SDM RSIG Kalianget, sampel 50 orang, teknik sampling *Purposive Sampling / Judgment Sampling*, variable penelitian implementasi PPI, tempat penelitian RSIG Kalianget, instrument penelitian lembar kuesioner.

Hasil penelitian menunjukkan bahwa Sebagian besar implementasi PPI di Rumah Sakit Islam Garam (RSIG) Kalianget adalah baik, yaitu sebanyak 36 responden (72,0%).

Perawat perlu meningkatkan pengetahuan dan keterampilan dalam implementasi PPI untuk menjaga mutu dan marwah RSIG Kalianget dalam menjaga keamanan dan keselamatan pasien selama masa perawatan. Rumah sakit sebagai tempat bekerja dan wadah dari berbagai profesi mempunyai kewenangan untuk memastikan setiap SDM rumah sakit dapat meningkatkan kemampuan SDM mengimplementasikan PPI dengan baik.

Kata kunci: *infeksi nosocomial, PPI, rumah sakit*

ABSTRACT

IMPLEMENTATION OF INFECTION PREVENTION AND CONTROL (PPI) AT RSI SALT KALIANGGET IN 2022

By: Riska Wahyuningtiyas

Indicators of the quality of hospital health services are patient safety and prevention of nosocomial infections is an important determinant in it. Infection Prevention and Control (PPI) must be managed and integrated structurally and functionally in all parts of the hospital to prevent nosocomial infections. The aim is to find out the Implementation of Infection Prevention and Control (PPI) at RSI Garam Kaliangget in 2022.

Quantitative descriptive research method, population of 287 HR of RSIG Kaliangget, sample of 50 people, sampling technique Purposive Sampling / Judgment Sampling, PPI implementation research variables, research location of RSIG Kaliangget, questionnaire sheet research instrument.

The results showed that most of the PPI implementation at the Kaliangget Islam Salt Hospital (RSIG) was good, namely as many as 36 respondents (72.0%).

Nurses need to increase their knowledge and skills in PPI implementation to maintain the quality and dignity of RSIG Kaliangget in maintaining patient safety and security during the treatment period. The hospital as a place of work and a place for various professions has the authority to ensure that every hospital HR can improve the HR's ability to properly implement PPI.
