ANC komprehensif yang berkualitas minimal 4 kali yaitu 1 kali pada trimester pertama, minimal 1 kali pada trimester kedua dan minimal 2 kali pada trimester ketiga. ANC sangat dianjurkan pada usia kehamilan 8-12 minggu, dengan memanfaatkan pelayanan Antenatal Care ibu hamil dapat mengetahui perkembangan janinnya, kesehatan dirinya serta risiko tinggi yang mungkin dapat terjadi, agar kiranya cepat ditangani dengan tepat. Tujuan dari penelitian ini untuk mengidentifikasi paritas, sikap dan dukungan suami terhadap cakupan K1 wilayah Puskesmas Gapura.

Penelitian ini merupakan penelitian observasional analitik, dengan pendekatan cross sectional. Populasi dalam penelitian ini seluruh ibu hamil yang datang ANC ke Puskesmas Gapura di bulan Juni – Juli sejumlah 80 ibu hamil, Teknik sampling menggunakan Simple Random Sampling, sehingga diperoleh 55 ibu hamil, Pengumpulan data menggunakan kuesioner. Data di analisis menggunakan Uji Chi-Square dengan  $\alpha 0,050$ .

Paritas ibu hamil di wilayah kerja Puskesmas Gapura sebagian besar Primi Gravida yaitu sebanyak 56,7%. diketahui sikap ibu di wilayah kerja Puskesmas Gapura sebagian besar memiliki sikap positif yaitu sebanyak 66,7%. diketahui dukungan suami di wilayah kerja Puskesmas Gapura hampir seluruhnya mendapat dukungan suami yaitu sebanyak 78,3%. diketahui cakupan K1 di wilayah kerja Puskesmas Gapura sebagian besar memiliki K1 murni yaitu sebanyak 56,7%. signifikansinya  $p \text{ value } 0,080 > 0,05$ , yang bermakna tidak ada hubungan paritas dengan cakupan K1. signifikan  $p \text{ value } 0,843 > 0,05$  bermakna bahwa tidak ada hubungan sikap dengan cakupan KI. signifikan  $p \text{ value } 0,019 < 0,05$  bermakna ada hubungan dukungan suami dengan cakupan KI. Dapat diartikan bahwa dukungan suami / keluarga sangat berarti untuk menjadikan motivasi pada ibu hamil untuk memeriksakan kandungannya, sehingga dapat meningkatkan cakupan K1.

## **ABSTRACT**

### **PARITY RELATIONSHIP, ATTITUDE, SUPPORT WITH HUSBAND COVERAGE OF KI FOR PREGNANT WOMEN IN GAPURA PUSKESMAS WORK AREA, 2022**

**By: Fauziatus Silmi**

*Quality comprehensive ANC at least 4 times, namely 1 time in the first trimester, at least 1 time in the second trimester and at least 2 times in the third trimester. ANC is highly recommended at 8-12 weeks of gestation, by utilizing Antenatal Care services pregnant women can find out about the development of their fetus, their own health and the high risks that may occur, so that they are quickly treated appropriately. The purpose of this study is to identify parity, attitude and husband's support for KI coverage in the Gapura Health Center area.*

*This research is an analytic observational study, with a cross-sectional approach. The population in this study were all pregnant women who came to ANC at the Gapura Health Center in June-July, a total of 80 pregnant women. The sampling technique used Simple Random Sampling, so that 55 pregnant women were obtained. Data collection using a questionnaire. Data were analyzed using the Chi-Square Test. with  $\alpha 0.050$ .*

*The parity of pregnant women in the working area of the Gapura Health Center is mostly Primi Gravida, namely 56.7%. it is known that the attitude of mothers in the working area of the Gapura Health Center mostly has a positive attitude, namely as much as 66.7%. It is known that husband support in the work area of the Gapura Health Center is almost entirely supported by husbands, namely as much as 78.3%. it is known that the coverage of KI in the Gapura Health Center work area mostly has pure KI, namely as much as 56.7%. the significance of the p value is  $0.080 > 0.05$ , which means that there is no relationship between parity and KI coverage. significant p value  $0.843 > 0.05$  means that there is no relationship between attitude and KI coverage. significant p value  $0.019 < 0.05$  means there is a relationship between husband's support and KI coverage. This means that husband/family support is very meaningful to motivate pregnant women to have their pregnancy checked, so as to increase KI coverage.*
