## ABSTRAK

**ASUHAN KEBIDANAN KOMPREHENSIF  
KEHAMILAN, PERSALINAN, NIFAS, BBL, DAN KB  
PADA NY”I” GIPI000I USIA KEHAMILAN 37 MINGGU  
DI BPM HJ. TITIK NURHAYATI, S.,ST**

**Oleh: Fatiratul Aini**

Tujuan laporan tugas akhir ini untuk memberikan asuhan kebidanan secara *continuity of care* pada ibu hamil, bersalin, nifas, neonatus dan KB dengan menggunakan pendekatan manajemen kebidanan yang di lakukan pada Ny.”I”. Asuhan diberikan di BPM Hj. Titik Nurhayati, S.,ST mulai tanggal 05 November 2020 sampai 22 April 2020. Pengambilan data dilakukan secara langsung dan melihat data rekam medis, pendokumentasian dilakukan dengan menggunakan Varney dan SOAP.

Asuhan kehamilan dilakukan kunjungan sebanyak satu kali pada usia kehamilan 40 minggu dengan HPHT 13 Juli 2020 dan TP 20 April 2020. Selama kunjungan ibu mengeluh pada pemeriksaan, yaitu sering buang air kecil, keluhan ini fisiologis dan telah di berikan teknik relaksasi. Didapatkan hasil pemeriksaan dengan keadaan umum baik dan tekanan darah 110/70 mmHg. Sehingga selama kehamilan Ny “I“ dalam keadaan baik dan normal. Asuhan Persalinan tanggal 22 April 2020 jam 18.50 WIB ibu datang ke BPM dengan keluhan kenceng-kenceng dan keluar lendir darah dilakukan pemeriksaan jam 19.00 WIB hasil VT Ø 9 cm eff 90%, ketuban (+), Hodge II. Pada jam 19.15 WIB dilakukan VT Pembukaan (Ø) 10 cm, efficement 100 % ketuban (-), Hodge IV. Saat proses persalinan ibu bersalin secara normal dengan asuhan APN 60 langkah, bayi lahir spontan jenis kelamin perempuan, BBL 2.790 gram PB 49 cm segera dilakukan perawatan bayi baru lahir. Masa Nifas berjalan dengan fisiologis, ASI lancar dan mengajarkan ibu menyusui dengan benar. Asuhan KB dilakukan sebanyak 2x, ibu telah diberikan motivasi untuk ber-KB dan telah dijelaskan macam-macam KB, keuntungan dan keterbatasan KB, meyakinkan kembali tentang KB yang digunakan dan ibu memutuskan untuk menggunakan KB 3 bulan dengan alasan agar tidak mengganggu proses menyusui.

Berdasarkan hasil asuhan kebidanan *continuity of care* yang telah dilakukan pada Ny.”I” diharapkan klien dapat menerapkan konseling yang telah diberikan selama dilakukan asuhan kebidanan sehingga kondisi ibu dan bayi tetap baik dan dapat mencegah terjadinya komplikasi hingga kematian.
