Pendahuluan: Keluarga menjadi orang terpenting bagi ibu hamil dengan masalah hepatitis B, keluarga berperan dalam memberikan dukungan untuk berobat, memberikan dukungan untuk meningkatkan konsep diri bagi ibu hamil yang menderita hepatitis B. **Tujuan:** Penelitian ini bertujuan untuk mengetahui hubungan dukungan keluarga dengan konsep diri ibu hamil yang menderita hepatitis B di Puskesmas Pasean. **Metode:** Penelitian ini menggunakan desain analitik korelasional dengan pendekatan *cross-sectional*, jumlah populasi sebanyak 35 orang diperoleh sampel dengan teknik *total sampling* yaitu 35 orang menggunakan alat ukur kuesioner dengan analisa data *rank spearman*. **Hasil :** Hasil penelitian ini didapatkan hampir seluruhnya ibu hamil memiliki dukungan yang cukup dari keluarga sebanyak 28 orang (80,0%), hampir seluruhnya ibu hamil memiliki konsep diri yang cukup sebanyak 30 orang (85,7%). Berdasarkan hasil analisis *rank spearman* didapatkan p value 0,015 (<0,05), artinya ada hubungan dukungan keluarga dengan konsep diri pada ibu hamil yang menderita hepatitis B di Wilayah Kerja Puskesmas Pasean Kabupaten Pameksan. **Kesimpulan:** dukungan keluarga berperan penting bagi ibu hamil yang menderita hepatitis B karena ibu hamil tersebut akan mengalami perubahan konsep diri karena rasa cemas, takut berlebihan, hingga putus asa, dengan dukungan keluarga yang baik dapat mempengaruhi konsep diri ibu hamil yang menderita hepatitis B

Kata kunci: dukungan keluarga, konsep diri, ibu hamil dengan hepatitis B

ABSTRACT

THE RELATIONSHIP BETWEEN FAMILY SUPPORT WITH THE SELF-CONCEPT OF PREGNANT WOMEN SUFFERING FROM HEPATITIS B AT PASEAN HEALTH CENTER

Introduction: The family is the most important person for pregnant women with hepatitis B problems, the family plays a role in providing support for treatment, providing support to improve self-concept for pregnant women suffering from hepatitis B. **Purpose:** This study aims to determine the relationship between family support and the mother's self-concept pregnant women with hepatitis B at the Pasean Health Center. **Methods:** This study used a correlational analytic design with a cross-sectional approach, with a total population of 35 people. The sample was obtained using a total sampling technique, namely 35 people using a questionnaire measuring tool with Spearman rank data analysis. **Results:** The results of this study found that almost all pregnant women had adequate support from their families, as many as 28 people (80.0%), almost all pregnant women had adequate self-concept, as many as 30 people (85.7%). Based on the results of Spearman's rank analysis, it was found that the p value was 0.015 (<0.05), meaning that there is a relationship between family support and self-concept in pregnant women suffering from hepatitis B in the Working Area of the Pasean Health Center, Pameksan Regency. **Conclusion:** family support plays an important role for pregnant women who suffer from hepatitis B because these pregnant women will experience changes in self-concept due to anxiety, excessive fear, to despair, with good family support can affect the self-concept of pregnant women suffering from hepatitis B

Keywords: family support, self-concept, pregnant women with hepatitis B
